

Case Study

Digital Media

Overview

Central Manpower Base (CMPB) Online Engagement Portal (OEP) aims to equip Pre-Enlistees with required information for National Service Enlistment. To ensure all pre-Enlistees can receive the information in a most effective and efficient manner, some of these information are delivered through videos.

Therefore, CMPB OEP requested EVVO to provision video hosting and streaming services on the Internet, with additional features/services to be in place, such as:

- To provide a Digital Access Management (DAM) portal, accessed by various user groups, to facilitate the efficient administration of video content, generation of statistical reports and all other requirements of the System. The DAM portal shall enable administrators to manage all video content and user accounts

- To ensure that the System in place has mitigations against security vulnerabilities and risks listed in the Open Web Application Security Project (OWASP) Top 10 and the SANS Institute/Common Weakness Enumeration (CVE) Top 25 Software Errors
- To ensure that the Computing Environment and System adheres to the secure configuration benchmarks published by the Centre for Internet Security (CIS)

Solution

Work plan and mitigation measures are discussed and formulate together with EVVO Media team and EVVO CyberSecurity Team, to address the customers' need without compromising in performance, and even exceed customer's expectation on the performance and security needs.

The work plan, together with all the security solutions to mitigate all said risks, are collated and developed into the Scope of Work (SOW), which was presented to CMPB OEP team. After a few rounds of consultation and discussion session, a finalised SOW within a stipulated timeframe is delivered. Furthermore, EVVO team completed the entire project within the stipulated project timeline. Due to security concerns and data protection, details in the SOW cannot be shared here.

Project Completion
