

Evvo Digital Product Management & Development Services

Designing for
security and
innovating for the
future

We span every stage of the software development life cycle

We strategically engineer towards excellence with an entrepreneurial approach. We deliberately strategise Product Engineering, monetizable Digital Product Innovation and Engineering Transformation.

From customer insights to post production, our product management and product design teams make the innovation process more seamless and predictable. We are laser-focused on delivering quality products and delightful customer experience with faster times to market and quicker ROI.

Digital Product Innovation

Innovation is right at the heart of new product development. At Evvo labs, our end-to-end product engineering expertise powers co-creation and innovation. We are involved in every step of the journey from ideas to building future-proof scalable products that last.

How We Lead Digital Product Innovation

Innovation Led Engineering

Disruptive:

Entrepreneurial & creative in everything we do. Making the right technology choices, building future-proof solutions that last with everchanging technology and business landscape

Hyper-Agile:

Lean and nimble, skilled engineers bringing industry best agile practices, productivity with the use of tools and frameworks, and metrics & outcome-driven approach with a relentless focus on quality

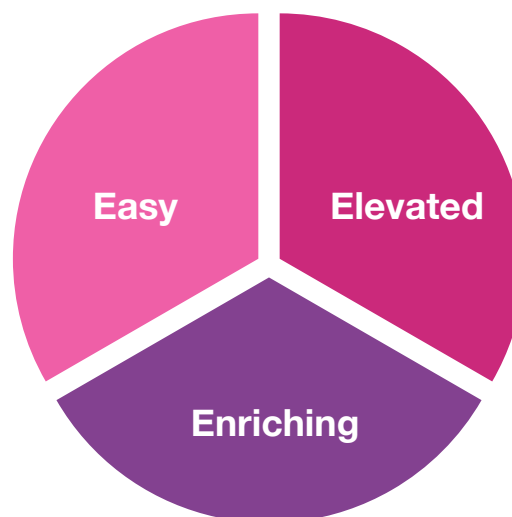

High-touch:

Highly collaborative, transparent, and rewarding culture, engaging with stakeholders, with complete ownership

Customer Experience

Easy:

Predictable, transparent, and fewer friction points to navigate through ambiguities, proactive, faster and clear communication with right metrics enabling faster decision making

Elevated:

Enabling customers to meet their business goals by providing software solutions faster, cheaper with reduced TCO and innovative tools and frameworks to accelerate the product development process

Enriching:

Bringing engineering rigor and excellence delivering future ready, scalable, quality software products & on time, responsive to ever changing and iterative nature of business

We leverage our business offerings via the following Services, to build new products

Product Management

Product Design & Front-end Technology

Product Development

Product Management

Evvo software product management services help guide clients to make critical product decisions. The product strategy framework involves collaborating with key stakeholders to understand the business problem, user groups, and outcomes beyond the problems your product solves. With an outcome based-mindset, collaboration, proven methods, and frameworks, we help you define a solid product development strategy to help you achieve your goals.

Product Discovery

Whether you are launching a new product or identifying new opportunities to generate business, we help you gather and analyse customer and market data to make critical decisions. From concept validation to bringing your ideas to market, we will partner with you at every stage. Our lean-startup methodology will help you build a minimum viable product (MVP) at competitive costs and grow at scale

Product Strategy

Successful product management starts with putting customers at the center of everything you do. We begin by understanding the problem space and user needs as the first step and then building a product-led growth strategy. Our digital product strategy is designed for high value outcomes.

Product Growth

Our engineering expertise helps scale a proven product idea or evolve existing products into new digital product experiences. we help our clients discover new growth opportunities and a value proposition that strongly resonates with the target market.

Product Design & Front-end Technology

We enable experience-led transformation by reducing the gap between customer expectations vs. experiences through a human-first approach. We help create meaningful digital experiences for products and services across all channels and touch points to enrich customer and stakeholder value and maximise market opportunities.

Experience Discovery

Our product design services team starts with uncovering critical insights into your target users' thoughts, anxieties and behaviour. Our experts strategies and create solutions leveraging evidence-based design to visualise and validate new ideas. We help create intuitive digital experiences that transform customer problems into business opportunities demonstrated through digital narratives and interactive prototypes.

Experience Transformation

We help analyse customer anxieties and frustrations within current experiences through comprehensive product design audits and plan organisational capabilities beyond the Voice of the Customer. We also help re-define and transform existing legacy experiences into desirable and intuitive customer experiences through future state service blueprints and high-fidelity product prototype designs.

Experience Audit

We conduct qualitative and quantitative customer experience reviews through Heuristic Evaluation, Usability Testing and Data Insights Analysis. These product design audits help us identify potential usability risks and experience gaps to improve the product experience and maximise customer value and growth. They also help us gain insights about customer expectations leading to further experience discovery or transformation

Product Development

The technology landscape is changing rapidly, and it is increasingly challenging for companies to capitalise on and respond to the technology trends like AI and ML, cloud-native development, low-code/no-code (LCNC) development, cybersecurity and automation.

Finding the right talent in these areas is hard, and upskilling programs take too long. But you can easily overcome these challenges using our software development as a service (SaaS) model. Leverage custom software development services to access the right technology talent and deliver quality, scalable and secure solutions on time and on budget.

Design and Code Assessments

Functional product features do not necessarily mean high-quality design, or a code written in a prescribed or maintainable manner. Our software product engineering team can help deep dive into low-level design and code to assess technical debt, adherence to best practices, and deliver an achievable remediation plan.

Proof of Concept

Most people believe that their ideas will work. Our Proof of Concept (PoC) approach will quickly validate the technical feasibility and viability, saving you time and money and uncovering possible risks. As part of the PoC, our team will also identify performance issues, validate the assumptions made in the ideation process and estimate the efforts to fully turn your idea into a real value-add solution.

Our Approach

Evvo software engineering helps technology product companies develop agile software by leveraging a dynamic innovation ecosystem of partners, platforms, and accelerators.

We deliver exceptional digital engineering solutions for independent software vendors (ISV) and enterprises in every industry. Our experienced engineering teams convert ideas into commercial off-the-shelf products or modernize them at speed, scale and cost. Our focus is on enabling and accelerating your digital transformation.

1

Discovery Lead Approach

Dedicated discovery phase at the start of engagement to solve issues like tribal knowledge, lack of documentation and to understand client's vision and roadmap for the product.

2

Relationship Beyond Contract

We engage with customers, as advisors/partners, to understand their business challenges, aspirations and recommend holistic solution & roadmap addressing those.

3

Transparency In Customer Connect

Open and transparent in managing and tracking the customer expectations and delivery progress.

4

Product Mindset

Identify and uncover needs from the stakeholders empathising core customer group needs while simultaneously boosting the product and innovation.

5

Product Engineering Best Practices

Standardised engineering processes, templates & tools to cover all aspects of development, QA & release management. that cover relevant functional & non-functional requirements.

6

Reusable Product Accelerators

Wide and exhaustive array of accelerators & frameworks to ensure higher productivity and shorter product engineering cycle & resulting in faster time to market and reduced total cost of ownership.

7

Seamless integrations between Delivery, Practices & Technology

All your integration questions and concerns are well taken care by our expertise, leaving you and your systems ready to navigate the next chapter in your SaaS journey.

8

Agile Maturity Assessment

For continuous improvement across distributed teams, we adapt agile development practices to deliver value at a rapid pace.

Let's help you build a boundless impact

We've always believed in the power of technology to engineer a better future. Born digital, we've helped the world's best companies succeed through transformation. Using a nimble and creative approach, we work together from start to finish to realize your vision for tomorrow. With the right talent and tools, we craft disruptive solutions and provide the right resources and expertise to give your concepts a life. Let us create a positive ripple effect that could touch billions of lives and build boundless impact in the digital landscape.

We Solve Your Technology Needs

We empower your business with the latest IT capabilities to get you ahead of your competitors. We make you smarter, greener and redefine your work environment and revitalize your business with AI tools and new innovative automation to enhance productivity to complete tasks faster thus reducing your operational costs.

We are experts at converging technologies at extremely competitive cost to build up your digital platform and have been extremely successful in helping startups, SMEs, blue-chip companies and even government agencies manage their digital transformation and data protection needs.
